Links displayed in 2x2 grid to prevent them from getting cut off of the smaller viewing window and to prevent any side scrolling to look for them.

No text is overlaid onto image in order to make the image look nicer on a smaller screen and to reduce screen clutter. Image width is at 100%.

Background changed to white to provide contrast for mobile viewers who may be viewing it outside. Font size increased compared to other break points to make the information easier to read on mobile, and extra line spacing added for the same reason. Padding removed from p elements to prevent them from getting cut off the screen.

Font size decreased in the footer to accommodate all the necessary text.

Footer has list items and links centered on the page so they are not cut off on the lefthand or righthand side of the webpage due to the smaller screen size of mobile devices.
